Create a collection for your requests

A collection lets you group related requests and easily set common authorization, tests, scripts, and variables for all requests in it.

Create Collection

POST https://20.244.56.144/evaluation-service/logs

Params Authorization Headers (10) Body Scripts Settings

Auth Type Bearer Token Token

The authorization header will be automatically generated when you send the request. Learn more about [Bearer Token](#) authorization.

Body Cookies Headers (12) Test Results 201 Created 39 ms 696 B

Windows PowerShell
To address all issues (including breaking changes), run:
npm audit fix --force

Run 'npm audit' for details.

Created git commit.

Success! Created url-shortener at C:\Users\HP\url-shortener
Inside that directory, you can run several commands:

  npm start
    Starts the development server.

  npm run build
    Bundles the app into static files for production.

  npm test
    Starts the test runner.

  npm run eject
    Removes this tool and copies build dependencies, configuration files
    and scripts into the app directory. If you do this, you can't go back!

We suggest that you begin by typing:

  cd url-shortener
  npm start

Happy hacking!
PS C:\Users\HP>
```
